Dear colleague,

We have seen your patient **MAIOROV DENYS**, °2/11/1982 at the consultation of tropical medicine on **12/01/2024**.

Anamnesis:

From Ukraine, since August 2023 in Belgium. major problems of communication

Since years lower back pain, upset stomach, itchy skin with irritation, swollen feeling, toothache, sore throat. No fever, no diarrhea, good appetite... For the moment main problem is backache (when moves)...

Multiple investigations (imaging) negative. Convinced that he suffers from (intestinal) candidiasis (obsession). Often takes fluconazole...Feels better with this treatment.

Physical exam:

Weight: 63 kg

Normal (no skin lesion)

Laboratory:

The result of the lab is available on CoZo.

Conclusion:

Despite very extensive blood investigations, we could not find any evidence of parasitic infection that might explain the lower back symptoms.

Yours sincerely.

EMMANUEL BOTTIEAU
